

***Cactus Wrens
of the San Dieguito
River Watershed:
Surviving Man and
Fires***

No. of Pairs of Cactus Wrens in San Diego County (Pre-2007 Fires)

Characteristics of Cactus Wren Distribution in Inland Northern San Diego County

Cactus Wrens are only found where prickly pear patches occur.

Prickly pears are found on south and west-facing slopes above river valleys.

Prickly pears of less than one meter in height are not suitable for placement of Cactus Wren nests

Prickly pears grow primarily on Cieneba series soils which are excessively-drained sandy loams derived from granitic rock.
