

Endangered Species:

Arroyo toad

Consult with READ

Description: A small toad (~3 inches long), brownish-tan to greenish-brown body with dark- and yellow-colored spots. NO white stripe down its back (unlike western toads). Adults active at night; juveniles can be active during the day.

Habitat: Slow moving streams with shallow pools, sandbars, stream terraces, sandy creek beds & wetland vegetation.

Protection: Arroyo toads are rarely visible, but they are present. Avoid disturbance in habitats listed above year-round.
