Adult

Larva

Known Locations

Description: A small (~1") orange, white and black butterfly. Larvae are up to 1", black, with orange spikes on their back.

Habitat: Patchy, open scrublands with several meters between shrubs. Often (not always) associated with soil crusts and clay soils. Found on rounded ridges and hilltops, gently rolling hills, & valley bottoms. During fire season Quino is dormant but present as larva.

Protection: Avoid ground disturbance in scrub openings and soil crusts.
